DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

(specification, page 5, paragraph 0018, line 3) delete "13" and instead insert --14--.

Appropriate correction is required.

Drawings

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "a continuous stripper belt disposed between the flat product and the axis of rotation..." must be shown or the feature(s) canceled from the claim(s). Note that Fig. 1 shows stripper belts 14 over grippers 13, which is not clear how applicants will be able to have the stripper belt between the flat product and the axis of rotations by the grippers 13. Furthermore, in claim 8 "...a second continuous stripper belt disposed between the flat product and the axis of rotation over a third angle of rotation of the cylinder and... that does not circumscribe the axis of rotation." and in claim 17 "...the stripping is performed... does not circumscribe the axis of rotation" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it

Art Unit: 3721

pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. "a continuous stripper belt disposed between the flat product and the axis of rotation..." it is not clear how applicants will be able to keep the stripper belt between the flat product and the axis of rotation while the stripper belt 14 is above gripper 13, see Fig. 1.

Furthermore, claims 8 and 17 points out to second stripper belt between the flat product and the axis of rotation not circumscribing the axis of rotation, it is not clear how applicants will achieve that nor it is clear how will it work.
